

# H89-Z37 Transition Board for 3.5" Drives

All Odd Pins Connected to Ground

All odd numbered pins are tied together on the top side of the board (red lines). Even pins are connected as shown by the black lines on the bottom side of the board.

## NOTES:

On the Heath H/Z37 the top four lines are switched between the lower and upper connector by a jumper placed on J4, J5, J6, or J7.

On the Norby-Z67 the top four lines are active all of the time on both the 3.5" and 5.25" output connectors.
