

The number of boot systems is determined by the size of the HD or CF card:

- 1 GB / 133 MB yields up to 7 systems (0 to 6)
- 2 GB / 133 MB yields up to 15 systems (0 to 14)
- 4 GB / 133 MB yields up to 30 systems (0 to 29)
- 8 GB / 133 MB yields up to 60 systems (0 to 59)

*(Dividing by 133 MB was simple & efficient)

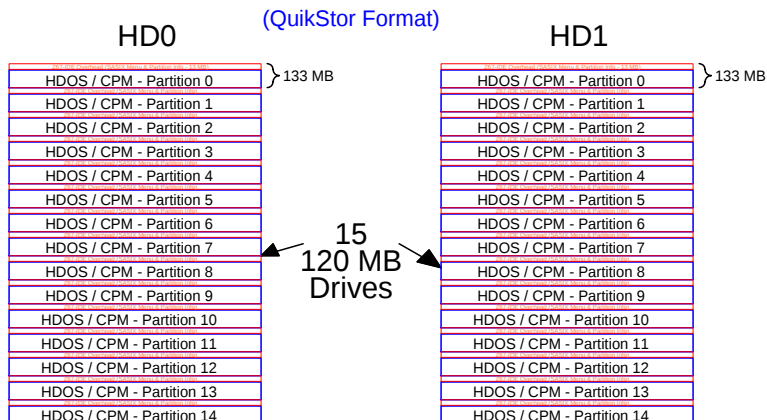

NOTE:

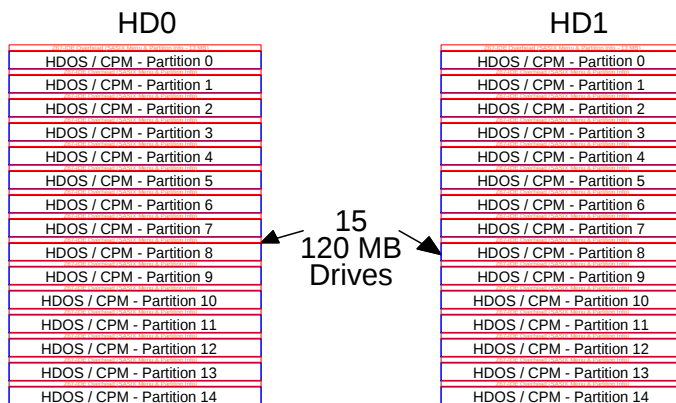

When using Heath's PREP/PART, only HD0 can be used for HDOS to result in a 15 MB drive with 8 partitions.
